GIRLS HOPE RESCUE MISSION

Agriculture News

In 2026, Girls Hope Rescue Mission has experienced continuing success with our **agriculture** and **sustainability** projects as they expand. Our ongoing **Black Soldier Fly** project creates sustainable, nutritious fertilizer for our agriculture and food for our livestock.

Black Soldier Fly fertilizer can also be used to feed the fish in our fish pond, which currently has over **2,000 fish**. Our fish pond will contribute to our community's long-term sustainability and health year-round, providing healthy, lean protein and a reliable means of income, all while using land and resources responsibly.

Fingerling fish from our fish pond

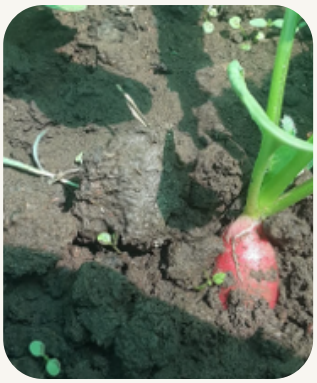

Fresh dragon fruit from our farm

Since our last update, we have also had a very successful 2026 harvest season. Our **dragon fruit** and **Wambugu apples** were highly sought after in the Migori market. These crops, along with others, allow us to not only feed our community, but also to earn income as our surplus grows, furthering our mission to **end generational poverty** for families we serve. Stay tuned as we look forward to another bountiful harvest this coming fall!

Updates and Highlights

NEW CROPS, NEW OPPORTUNITIES!

Due to the success of our crops thus far, we have been encouraged to start growing **radishes** on the farm. With the growing diversity of crops on our farm, the students at **Bright Spark Academy** are gaining direct experience with Kenya's agricultural abundance.

New radish shoots

LIVESTOCK UPDATES

Thanks to our Black Soldier Fly project and solar power, we have begun hatching chicks for our farm. This project will produce up to **1,000** hatchlings per month!

Our new raised chicken coops

In addition, we have also recently installed a new bandsaw in our **Pork Butchery Shop**, which allows us to make clean, healthy cuts of meat for local customers.

Our cows also continue to produce over **10 liters** of milk per day, providing nutrition and income to our community.

ONGOING PROJECTS

Thanks to the generous support of our sustaining donors, we have been able to maintain a variety of crops and livestock on the farm while helping those affected by female genital mutilation reach their **full potential** through food security and education.

Our fresh produce, dairy and meat products provide a sustainable income toward our cause. This enables us to make lasting investments in our students.

Stay in touch with us on social media to learn more about our future successes and consider donating to our cause for **generational change.**
